Conclusion Planning Template

Write in point form for this copy BUT needs to be in sentence and paragraph form for rough and good copies of the conclusion.

PARAGRAPH 1

Hypothesis – Restate & Evaluate the What

(Were you right or wrong at the beginning of the experiment?)

Observations – Qualitative

(What your 5 senses noticed; only the relevant ones that support your evaluation of you hypothesis.)

Observations – Quantitative

(What you measured and your results and calculations. Use the math Luke.)

PARAGRAH 2

Science – Explain Why This Happened

(Okay you need to do some more research to explain the science behind the experiment. Find good science vocabulary words that you can learn and understand. Why did the experiment work the way it did. VERY IMPORTANT PART!)

** Use the second research template to help you answer questions to your project. Record your sources of information as they must be included in your lab report and on you display.

Finally

Now join it all together in a rough copy then PROOF READ, EDIT, and then type up a good copy.

- Paragraph 1 = Hypothesis & Observations
- Paragraph 2 = Science
